

S.N. 10/618,217  
John Martin Moffatt  
Atty Dkt 200208709-1

**Amendments to the Claims**

1. (currently amended) A projector comprising:  
a housing defining an interior and an exterior;  
a first projection path extending from said interior to a first surface on  
said exterior;  
a second projection path extending from said interior to a second  
surface on said exterior;  
a light source positioned in said interior, said light source capable of  
creating a first image on said first surface and a second image on said  
second surface a visual;  
wherein said first projection path is aligned with said light source; ~~and~~  
wherein said second projection path is aligned with said light source;  
and  
wherein, said first image is larger than said second image.
2. (original) The projector of claim 1 and further comprising:  
a beam splitter positioned in optical communication with said light  
source, wherein said first projection path is aligned with said light source via  
said beam splitter; and  
wherein said second projection path is aligned with said light source  
via said beam splitter.
3. (original) The projector of claim 1 wherein:  
said first projection path is fixed relative to said projector; and  
said second projection path is adjustable relative to said first projection  
path.
4. (original) The projector of claim 1 wherein said first projection path is

S.N. 10/618,217  
John Martin Moffatt  
Atty Dkt 200208709-1

transverse to said second projection path.

5. (original) The projector of claim 1 wherein said first projection path is perpendicular to said second projection path.

6. (original) The projector of claim 1 wherein said first projection path is parallel to and oppositely disposed relative to said second projection path.

7. (currently amended) The projector of claim 1 and further comprising: a port for receiving data representative of said image visual.

8. (currently amended) A method for presenting a visual, said method comprising:

generating a first visual emitted from a projector along a first projection path;

generating a second visual emitted from said projector along a second projection path;

projecting said first visual onto a first wall causing a first image to be formed on said first wall; and

projecting said second visual onto a second wall causing a second image to be formed on said second wall; and

wherein, said first image is larger than said second image.

9. (canceled)

10. (currently amended) An apparatus comprising:

a means for projecting at least a first image and a second image one image;

a first projection path extending from said means for projecting; and

S.N. 10/618,217  
John Martin Moffatt  
Atty Dkt 200208709-1

a second projection path extending from said means for projecting,  
said second projection path being directed in a direction different than said  
first projection path; and  
wherein said first image is larger than said second image.
